

## Ø52 mm Plastik Gövdeli Termometre

- It is used where industrial measurement accuracy is required.
- Copper alloys are used for temperature measurement of non-corrosive liquids and gases.
- Thanks to the capillary tube, the gauge can be mounted at a different point from the heat source. (max. 2 mt.)
- Industry: Machinery manufacturers, heating - air conditioning machines and boiler manufacturers.

**Model No: C 0522**

## Product Specifications

STANDARD FEATURES	
Accuracy Class:	2,5
Capillary Tube:	99cm, it can be change on the request
Mechanism:	Brass
Frame:	ABS
Temperature Range:	0..120°C, 0..160C, 0..200C, 0..250C, 0..500C

### FEATURES ON THE REQUEST

- Other lenght capillary tube
